HARNESS ATTACHMEN

Patented NOVEMBER 13TH, 1888.

J. S. Coolidges Harness attachment is the best thing of the kind ever put on the market. It is so arranged that any one can secure it to any harness, in three minutes, without cutting the same in any way, right out in the street. It can be taken off the harness in two minutes, and the harness returned to its former style without the least trouble or exertion. It saves time in hitching and unhitching as a horse can be attached to the vehicle in less than 30 seconds and extricated in less than 5 seconds. It is an ornament to the harness and contains nothing in its parts to get out of order, the case being so constructed that the straps can be lengthened or shortened as is required. The Bolt is removable secured so as to allow the spring to be removed when wora. The particular advantage this device possesses over others consists in the construction of the case and arrangements of the straps, whereby the same may be attached to any harness without cutting the same, as has been heretofore necessary in order to use devices of this character.

To the loop of the Bolt may be attached lines 28, said lines being connected with the driver by suitable means, so that if the horse runs or becomes unmanageable, the tightening of the lines will draw the bolt 12, and the spring 24 will cast the plate 16 aside and release the animal from the vehicle. Any woman or child can hitch or unbitch a horse without the slightest trouble. Thousands of the attachments are being used every day.
